

Eco-Friendly.
Produced from recycled wood fibers.

Produced from 100% recycled and recovered wood fibers, Uniboard®'s MDF panels are eco-friendly. They are carbon neutral because the fiber particles encapsulate CO₂ that would otherwise remain in the atmosphere.

Uniboard® also manufactures its own resin, resulting in a **superior MDF product.**

Nothing Compares to our Fiber in North America!

Uniboard® was one of the first in North America to introduce Super Refined MDF, setting a new benchmark for precision and quality.

Our advanced MDF panels are engineered to meet the highest standards, offering unparalleled smoothness and consistency for a flawless finish.

Our secret component: Black Spruce Fiber.

Black spruce is a wood species known for its strength and homogeneous texture, which contributes to the quality of MDF panels.

Black spruce fibers provide uniformity in panel density and texture, beneficial for manufacturing high-quality finished products.

In addition to its strength, black spruce is also prized for its lightness, which facilitates handling during production and transport. This unique combination of lightness and strength allows for the creation of durable yet versatile MDF boards, ideal for a wide range of applications in construction and design.

redefining wood®

Uniboard®'s
MDF Meets Every Need!

MDF Product Portfolio

We offer one of the most Comprehensive Lines of MDF.

Over the past several decade, we have added to our portfolio of **specialty MDF products**. Our Excel+® and now Excel+® MAX are benchmarks in the industry against which high routing boards are judged. Our exceptionally broad range of matrix sizes across all grades allows for complete truck or railcar loads with an assortment of MDF products.

Please refer to uniboard.com for current information regarding certifications, full environmental data sheets and green rating system contributions. Although the information in this document is presented in good faith and believed to be correct, Uniboard makes no representations or warranties as to the completeness or accuracy of the information. Uniboard® shall have no liability for any errors or omissions contained therein or for any consequences of same.

FSC is available on all products subject to a surcharge.

The First North American MDF Mill to install a continuous press.

We have a strong history since 1989 of producing high quality MDF to support our clients' growth.

Uniboard® is the only North American owned manufacturer to offer thermally-fused laminated MDF in more than 160 colors and 15 textures.

- **1987**

First North American MDF mill to install a continuous press.

- **1988**

Construction of the Unires factory to produce our own resin.

- **1996**

Uniboard® maintains its leadership position in MDF in North America with production of **150 million sq ft** per year.

- **2019**

Uniboard® adds a wood fiber dryer with innovative technological expertise in clean air and greenhouse gas reduction, thereby **reducing the company's CO₂ emissions** and increasing production capacity.

- **2020-2025**

Uniboard® develops five new specialty grades of MDF to become the North American leader.
